

Vicura celebrates its first anniversary

After 20 years in the business we celebrated our first year as an independent company together with customers, employees and their families on May 24th. The day included both technology fair and dinner buffet. During this event we unveiled our new communication platform Vicura 2.0 showing the future direction.

In magnificent sunshine the afternoon started with a technology fair at Vicura's premises for invited customers.

The fair was held in the big main tent where visitors could see 14 different stations and listen to mini seminars on various topics. Technologies and development methods created by Vicura were presented.

Examples from several areas such as vehicle, marine and energy were shown. An electric vehicle driveline with control system was one of the things presented.

The analysis team spoke about oil flow (CFD) and heat treatment simulation and the value of doing this.

Model based development and the advantage of Hardware In the Loop were presented by our controls group.

Vicura is a company of engineers, creating entire solutions for drivelines that excel at capturing motion. Our customers are global companies in the car, commercial, construction, energy and marine industries.

Dennis Lundgren, CEO, and Sune Nilsson, chairman of the board, held opening speeches about Vicura's progress and future.

The visitors found shade and refreshments in one of the tents.

Some of the employees showed their own vehicles. A SuperSonett, built from scratch on mainly Saab parts to the concept of the 1957 Lotus SuperSeven. Further a three-wheeler, called TreeVee, built by the owner as a modern interpretation of the classic Morgan concept and registered as a motorcycle. A Saab Sonett II V4 from 1968 and a Ford GT40 replica were also in place.

Later in the afternoon Magnus Wall presented the launch of Vicura 2.0 as the new communication platform for the future.

All present during the event got a little memory from the day to take home. The evening was finished at a restaurant in Trollhättan with food and amusements.

Feedback from participants was that the event was interesting and fruitful.

The Vicura team thanks all participants and looks forward to coming years of cooperation!
